Slim fit

Regular fit

Relaxed fit

Loose fit

When taking part in outdoor adventures, multiple layers of merino wool give the best protection. That's why we have developed our own Wool Layering System. Several thin wool layers offer better insulation and temperature control than one single thick layer. We provide the best options for you – no matter what the temperature or level of activity. In addition, wool is a unique natural fibre with outstanding qualities: Wool is renewable, odour-free, soft against the body and insulates even when it's wet.

U Wool Underwear
Our innermost wool underwear is close fitting, comfortable and forms the whole basis of our Wool Layering System.

1st Wool Layer
Our first layer of wool insulates and wicks away sweat – both during summer and winter activities.

2nd Wool Layer
Our second layer of wool absorbs moisture from the inner layers and provides extra insulation.

3rd Wool Layer
Our third layer of wool provides even more protection against cold temperatures and wind.

An example of layering

To make the layering system more comprehensible, we have made layer suggestions for each product presented in this catalogue. The layers suggested from us is not set in stone, it is to be regarded as an expert suggestion and recommendation from Aclima.

Here you see an example on how to dress for high level activity during winter.
